

GHANSHYAM PATIDAR

+91 75666 50644 | ghanshyampatidar3011@gmail.com

Objective

To take up responsibility with an organization where my personal potential can make a meaningful contribution to the organization's success as well as self development.

Experience

Role: React Native Developer (Intern)

Company: Isaii – Remote | Coimbatore, Tamil Nadu, India

Technology and Tools: React Native, Expo, JavaScript, REST APIs, Git, State Management

Duration: June 2025 – October 2025

Description: Worked on developing and maintaining cross-platform mobile applications using React Native and Expo. Integrated backend APIs and real-time data features into mobile applications while improving application performance and user experience.

Responsibilities:

- Developed and maintained cross-platform mobile applications using React Native and Expo.
- Integrated backend APIs and real-time data features into mobile applications.
- Worked with state management and mobile application workflows for improved performance.
- Used Git for version control and collaborated with team members during development.

Skills

- **Data Structures and Algorithms (DSA):** Proficient in data structures and algorithms, with around 400 LeetCode problems solved.
- **Full Stack Developer:** Skilled in MERN stack (MongoDB, Express.js, React.js, Node.js) and React Native with experience in building dynamic web apps and data visualization using Chart.js and D3.js.

Projects

Project Name: BoloBill – Voice-Based POS Software

Role: React Native Developer

Technology and Tools: React Native, Expo, JavaScript, Redux, SQLite, Google Speech Recognition, REST APIs, Git

Duration: January 2025 – Present

Description: Developed a voice-based Point of Sale (POS) Android application designed to simplify and speed up retail billing operations using voice commands. The application integrates Google Speech Recognition to allow hands-free product entry, invoice generation, and billing management. The system significantly reduced manual typing efforts and improved billing efficiency in retail environments. Offline data handling and optimized workflows were implemented to ensure fast and reliable performance during transactions.

Responsibilities:

- Developed and maintained cross-platform mobile application features using React Native and Expo.
- Integrated voice recognition functionality to automate product search and billing operations.
- Optimized invoice generation and product lookup workflows, improving transaction speed by 71.48%.
- Worked with REST APIs, local storage, and state management for efficient application performance.

Project Name: COWIN Dashboard

Role: Frontend Developer and Data Analyst

Technology and Tools: HTML, CSS, JavaScript, Chart.js, D3.js, JSON

Duration: August 2024 – November 2024

Description: Developed a dashboard application for analyzing COVID-19 vaccination data using dynamic visualizations and interactive charts. The application processes JSON-based datasets to display vaccination trends, demographic distributions, geographic analysis, and registration statistics. The dashboard helped in understanding vaccine coverage patterns through graphical insights and responsive visual components.

Responsibilities:

- Processed and analyzed JSON vaccination datasets for visualization purposes.
- Built interactive charts and graphs using Chart.js and D3.js.
- Developed responsive frontend components using HTML, CSS, and JavaScript.
- Implemented visual reports for age groups, gender distribution, vaccine types, and state-wise coverage.

Project Name: AndroidCLI – Android Terminal Application

Role: React Native Developer

Technology and Tools: React Native, JavaScript, Expo, AsyncStorage, Git

Duration: October 2024 – January 2025

Description: Developed an Android-based terminal application that simulates Linux terminal commands on mobile devices. The application supports commands such as `mkdir`, `rmdir`, `write`, and `ls`, along with command history and auto-completion functionality. The project focused on improving accessibility to terminal-based operations through smartphones.

Responsibilities:

- Developed command execution and file handling functionalities using React Native.
- Implemented terminal features such as command history and auto-completion.
- Designed and improved the mobile terminal user interface for better usability.
- Collaborated with team members to enhance application functionality and performance.

Project Name: Ecommerce Website – MERN Stack

Role: Full Stack Developer

Technology and Tools: MongoDB, Express.js, React.js, Node.js, JWT, REST APIs, Git

Duration: February 2024 – June 2024

Description: Developed a full-stack ecommerce web application using the MERN stack to manage products, users, authentication, and cart operations. The platform includes secure login and registration, product management APIs, shopping cart functionality, and responsive user interfaces. JWT-based authentication was implemented to ensure secure access and session handling.

Responsibilities:

- Developed backend RESTful APIs for product management and user authentication.
- Implemented JWT-based authentication and secure session handling.
- Built responsive frontend interfaces using React.js for seamless user experience.
- Integrated MongoDB database operations for efficient product and user data management.

Education

Jabalpur Engineering College, Jabalpur, M.P. Bachelor of Technology in Computer Science and Engineering	2022–26
Bright Arsenal Higher Secondary School, Dewas, M.P. Standard XII / S.S.C	2021–22
Holy Angels High School, Ashta, Sehore, M.P. Standard X / H.S.C	2019–20
